Parrot launches the new 3200 LS-COLOR PLUS at CeBIT

Upgraded hands-free car kit includes latest generation of DSP technology and removable colour screen

CeBIT (Hanover), March 15th 2007 – Parrot, one of the global leaders in wireless mobile phone peripherals, today launched the new upgraded version of its *Bluetooth®* colour-screen car-kit, the Parrot 3200 LS-COLOR PLUS.

The Parrot 3200 LS-COLOR PLUS is an installed hands-free car kit with a large bright colour TFT screen. The kit automatically synchronises with your mobile phone's phonebook, with the full colour screen immediately displaying the contact's name, phone number, and even caller ID photos when you have an incoming call.

The new Parrot 3200 LS-COLOR PLUS now includes Parrot's latest innovations in DSP (Digital Signal Processing) for exceptional in-car sound quality and a detachable screen for total security at all times.

Using Parrot's 'Beamforming' technology, the system includes a double-microphone which identifies background noises to eliminate them more efficiently and isolate the driver's voice, similar to a human ear. The result gives you crystal-clear conversations transmitted directly onto the car speakers. The microphones are totally invisible and are integrated within the kit's screen, taking up minimum space on the dashboard.

The customisable and anti-theft removable screen features a high resolution TFT display of 160x128 pixels and 262 x 144 colours. You can choose between a large selection of ring tones and wallpapers - from the kit itself or from the associated mobile phone.

As standard on all Parrot car-kits, the unique voice recognition system of the Parrot 3200 LS-COLOR PLUS allows you to forget about your phone and keep focused on the road. You can access various commands simply by using your voice. For example, to pick up a call, just say "phone" or to place a call simply pronounce your contact's name.

The Parrot 3200 LS-COLOR PLUS can be easily installed in most vehicles and is compatible with virtually all *Bluetooth* mobile phones.

The Parrot 3200 LS-COLOR PLUS will be available worldwide at the end of the second semester 2007 online and through retailers, SRP £129.99

Ends

ABOUT PARROT

Founded in 1994, Parrot has rapidly established itself as a pivotal global player for wireless mobile telephone accessories. Drawing on its tried-and-tested expertise on voice recognition and signal processing technologies, Parrot was one of the very first companies to produce *Bluetooth*®-based wireless hands free car kits, having identified this standard's vast potential as early as 1999. In 2006, Parrot sold about 3 million units.

Determined to accompany the wireless peripherals' irresistible breakthrough into our day-to-day lives, Parrot has been developing since 2006 a new wireless range of sound and image products.

Today, Parrot truly has a major international focus: 90.5% of its sales are generated outside of France, and a large percentage of its production is outsourced to carefully selected partners, enabling it to achieve the best possible level of quality and responsiveness. Parrot is now particularly well positioned to capitalize on the bright future opening up for mobile telephone devices.

Parrot has achieved strong growth in its consolidated revenues, up from 80.9 million euros pro forma in 2005 to 166.9 million euros in 2006.
